EIRICH Machines Supplies Material Preparation System to New Fertilizer Plant in Canada

EIRICH Machines is proud to be part of the project announced by [Pursell](#) and [Sollio Agriculture](#), along with partners from its retail networks, to build an innovative fertilizer coating plant in St. Thomas, ON.

The new plant will break ground in the fall of 2021 and is expected to become operational in August of 2022. It's dedicated to production of advanced controlled-release fertilizers (CRFs) and will produce up to 100,000 tons once full capacity has been reached.

EIRICH Machines has worked closely with Pursell to provide the best solution for their specific needs and to solve the challenge that CRF production can pose. The complete preparation system includes material handling, structure, solids and liquid delivery, batching, EIRICH intensive mixers, environmental controls, process control system, and more.

“We are extremely pleased to partner with industry leading companies such as Pursell and Sollio Agriculture, and we look forward to continuing our strong commitment and tradition of providing state of the art processing technology,” stated Matthias Erdmannsdoerfer, Managing Director at EIRICH Machines. “This partnership shows our capabilities to provide the process knowledge and unparalleled support required to deliver complex processing plants in North America and around the globe,” continued Erdmannsdoerfer.

EIRICH Machines is part of EIRICH Group and delivers sophisticated and innovative processing plant solutions to companies around the world. EIRICH's seven test lab locations (including one in Gurnee, IL) offer companies the opportunity to perform R&D and go from lab scale to full production. This global presence makes EIRICH the preferred supplier for rapid expanding organizations.

Joe Brady, Pursell CFO and sustainability lead contributes “Our partnerships with leading innovators in the industry, like EIRICH Machines, allow us to implement unique process advantages in our fertilizer plants including faster curing and batch times than traditional controlled release technology and lowered operating temperatures that allow for survivability of temperature sensitive additives.” We look forward to continuing our partnership with EIRICH as we begin work with Stamicarbon in licensing our technology globally.”

For more information about the new fertilizer plant, read the [press release](#) from Pursell/Sollio Agriculture.
