

Training

The Pioneer in Material Processing

Training

Having the best equipment is only part of the story. You also need highly qualified personnel to get the most out of your Eirich machines/systems, so there is no alternative to in-depth training provided by the manufacturer. Knowledge transfer and sharing of information on how to recognize and deal with unexpected events enable your people to react quickly and make the right decisions when a machine goes down.

Advanced training increases the confidence level and provides a broader knowledge base for assessing equipment performance. Highly qualified employees get the most out of your Eirich machinery, giving you a direct competitive advantage. Eirich Training is tailored to the specific target group and function, and it is aimed primarily at either operators or maintenance personnel.

Training courses:

- **Basic training** presents foundation level information and provides a solid basis for handling day-to-day operations.
- **Refresher courses** provide more in-depth information as users become more familiar with the machines.

Eirich offers both levels of training at its manufacturing plants or on site.

The training packages include:

- Training handouts including digital images
- Instruction in machine operation
- Machine demonstration under production conditions
- Demonstration of a simulated fault
- Production monitoring
- Training in technical aspects of the production process
- Presentation of maintenance and repair activities
- Practical repair and maintenance exercises
- Final test
- Explanation of Eirich documentation

The advantages of Eirich training:

- Professional training directly from the manufacturer
- Information on the latest technical developments
- Operator qualification
- Dependable knowledge transfer when your operators change
- You retain your level of productivity
- Training conducted on site
